

Three ways Banastar® helps get your OSR off to the best start...

1 It helps you establish a good, even crop before winter

To establish a good, even crop, our advice is to:

REMOVE WEEDS EARLY

2 It provides long-lasting and reliable control of key weeds

RELIABLE IN DRY CONDITIONS DUE TO MULTIPLE POINTS OF UPTAKE BY THE WEED

RESIDUAL ACTIVITY ON A WIDE SPECTRUM OF WEEDS, INCLUDING:

AVOID HAVING TO RELY ON LATE AUTUMN SPRAYS...

CONTACT HERBICIDES CAN BE AFFECTED BY LEAF WETNESS

SMALL WEEDS CAN BE COVERED BY THE CROP

3 It plays a key role in sustainable black-grass management

OSR OFFERS A GOOD OPPORTUNITY TO CONTROL BLACK-GRASS AND USE DIFFERENT MODES OF ACTION COMPARED TO CEREALS

A LOW RESISTANCE RISK HERBICIDE AND PROVIDES A KEY START TO THE BLACK-GRASS PROGRAMME

REMOVES SOME OF THE BLACK-GRASS POPULATION

FOR BEST CONTROL, USE A 3 PRONGED ATTACK – A PROGRAMME OF AN EARLY RESIDUAL, LIKE BANASTAR®, FOLLOWED BY CLETHODIM, THEN PROPYZAMIDE
