

Introducing Limus® Clear

BASF
We create chemistry

If you want to stop profits escaping, start by choosing Limus® Clear

Available exclusively from Frontier Agriculture, Limus® Clear is a new urease inhibitor for use with liquid fertiliser (UAN) that minimises nitrogen losses and supports optimal nitrogen availability for your crop.

Liquid Fertiliser (UAN) Nitrogen losses

Nitrogen can be lost as ammonia following the application of liquid fertiliser (UAN). UK research suggests average nitrogen losses from UAN range from 11-14%. The amount of nitrogen loss was dependent on environmental conditions, including soil water content, soil temperature and rainfall.

Limus® can reduce these losses by up to 98%, improving nitrogen use efficiency (NUE) on farm, whilst reducing ammonia emissions.

Factors that increase risk of ammonia (nitrogen) losses

- Warm temperatures
- Dry soils
- Less than 10mm of rainfall within 48 hours
- Alkaline (high pH) soils

Limus® Clear should be used when the risk of nitrogen losses are high.

Benefits of Limus® Clear

- Improves nitrogen use efficiency (NUE) by reducing ammonia emissions by up to 98%
- Increases yield compared to untreated liquid fertiliser (UAN)
- Contains two actives (NBPT + NPPT) for optimal efficacy
- Fully compatible with liquid fertiliser (Straight N and NS grades)

+4% yield*

2019 ADAS Agronomics trials

Three UK growers added Limus® Clear to their final two liquid fertiliser applications in 'agronomics' tramline trials. The ADAS analysis showed a clear benefit of Limus® Clear at all three sites.

Site	Yield benefit	MOIC
Essex	+0.29 t/ha**	+£36.15
Leicestershire	+0.17 t/ha**	+£18.36
Bedfordshire	+0.57 t/ha	+£76.57
Cross-site analysis	+0.24 t/ha**	

*Source: ADAS/BASF, Limus Clear applied in 2 of the fertiliser applications, n = 3, wheat, MOIC based on wheat at £150/T

**Statistically significant

What makes Limus® Clear unique?

Urea is not readily plant available and first needs to be converted into ammonium. This is done by urease enzymes in the soil that bind to the urea. Without sufficient rainfall post application, the ammonium concentration around the site of application increases, leading to a localized increase in soil pH. This converts the ammonium to ammonia gas.

Urease inhibitors temporarily bind to these enzymes, preventing the localised pH spike and reducing the losses of ammonia. However, different urease enzymes require different urease inhibitors. Limus® is the only urease inhibitor available with two active ingredients (NBPT and NPPT), enabling it to bind to a wider variety of urease enzymes and more effectively minimise losses.

How to use Limus[®] Clear

1. Fill spray tank with half the desired amount of fertiliser
2. Add the correct rate of Limus[®] Clear and mix thoroughly
3. Continue mixing while adding remaining fertiliser
4. Use tank mix within 5 days

Application Rate Guide, Spring 2020

Always read the appropriate Safety Data Sheets and wear appropriate PPE to ensure good operator safety when handling UAN / Limus[®] Clear.

Omex Products

Product Name	Analysis % (w/w)		Analysis % (w/v)		Limus [®] Rate (lt/m ³)
Nitroflo 30	30%N		39%N		1.00
Nitroflo 28 + S	28%N	2.5%SO ₃	36%N	3.2%SO ₃	0.90
Nitroflo 26 + S	26%N	5%SO ₃	33.5%N	6.4%SO ₃	0.80
Nitroflo 24 + S	24%N	7.5%SO ₃	30%N	9.5%SO ₃	0.70
