## ALLSTAR Dosatron filling

## PRODUCT FILLING

ALLSTAR is applied at $0.81 /$ ha and can only be applied in-furrow to a potato crop.
This is below the minimum setting of most Dosatron units.
Therefore BASF recommend using one of two solutions for this:

1. Add ALLSTAR and container washings to the water tank and apply conventionally without a Dosatron unit (See Option 1) or
2. Add ALLSTAR and container washings to concentrate tank of the Dosatron and use the lowest setting (see Option 2 for TEAM applicators, Option 3 for Grimme and Techneat applicators.) The addition of the container washings is important to allow the Dosatron method to work correctly.

Option 1 - using the water tank:
Add product as with a conventional sprayer.
Eg. If using a water volume of $1001 / \mathrm{ha}$, then add 1.0 I ALLSTAR to 125 water.
Option 2 - using the Dosatron on TEAM Compact 90/120:
To achieve the correct application rate of $0.81 /$ ha, using 1001/ha of water, follow the process below:

Add product as you would with azoxystrobin.
Set the Dosatron to deliver $1 \%$ product ( $1 /$ ha in $1001 /$ ha water).
250 ml of water in total needs to be added to the concentrate tank in order to achieve the correction dilution for the $1 \%$ setting. Add half of this to the tank first to aid mixing.
Add 1 Litre ALLSTAR to concentrate tank.
Add the remaining water to the concentrate tank and ensure this is well mixed.
For other water rates and Dosatron settings, please see dilution tables below for more information.

Option 3 - using the Dosatron on Techneat In-Furrow or Grimmie/Horstine Applicator: To achieve the correct application rate of $0.81 /$ ha to apply to 1 ha, using 1001/ha of water, follow the process below:

Add product as you would with azoxystrobin.
Set the Dosatron to deliver $3 \%$ product (31/ha in 1001/ha water).
2750 ml of water in total needs to be added to the concentrate tank to achieve the correction dilution for the $3 \%$ setting. Add half of this to the tank first to aid mixing.
Add 1 litre ALLSTAR to concentrate tank.
Add the remaining water to the concentrate tank and ensure this is well mixed.
For other water rates and Dosatron settings, please see dilution tables below for more information.

If using lower water volumes, the total volume to dilute the concentrate are as follows (differs from Option 2 because continue to use lowest setting):

- Using 501/ha then the total volume of needs to be halved to 1875 ml , ie 875 ml of water needs to be added to the 1 litre of ALLSTAR in the Dosatron tank.
- Using 75I/ha then the total volume of product is 2813 ml , ie 1813 ml of water needs to be added to the 1 litre of ALLSTAR in the Dosatron tank.

## Dosatron dilution factors

TEAM APPLICATOR (12 litre concentrate tank) Mls water required for correct dilution when using a Dosatron unit at the relevant concentration (\%).

|  |  | Water volume (l/ha) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 50 |  | 60 |  | 70 |  | 75 |  | 80 |  | 90 |  | 100 |  | 110 |  |
| Container size (I) |  | 1 | 5 | 1 | 5 | 1 | 5 | 1 | 5 | 1 | 5 | 1 | 5 | 1 | 5 | 1 | 5 |
| Dosatron setting | 1\% | X | X | X | X | X | X | X | X | X | X | 125 | 625 | 250 | 1250 | 375 | 1875 |
|  | 1.5\% | X | X | 125 | 625 | 313 | 1565 | 407 | 2035 | 500 | 2500 | 688 | 3440 | 875 | 4375 | 1063 | 5315 |
|  | 2\% | 250 | 1250 | 500 | 2500 | 750 | 3750 | 875 | 4380 | 1000 | 5000 | 1250 | 6250 | 1500 | X | 1750 | X |
|  | 2.5\% | 563 | 2825 | 875 | 4375 | 1188 | 5940 | 1344 | 6725 | 1500 | 7500 | 1813 | X | 2125 | X | 2438 | X |
|  | 3\% | 875 | 4390 | 1250 | 6250 | 1625 | X | 1813 | X | 2000 | X | 2375 | X | 2750 | X | 3125 | X |
|  | 3.5\% | 1188 | 5955 | 1625 | X | 2063 | X | 2282 | X | 2500 | X | 2938 | X | 3375 | X | 3813 | X |

$\mathrm{X}=$ not possible with Dosatron; use water tank as for a conventional spray
NOTE, table relates to Dosatron with $1 \%$ lowest setting
Worked example: Water volume $75 \mathrm{I} / \mathrm{ha}$
Using full 5 litre container
Dosatron setting 2\%
Add 4380 ml container washings to concentrate tank ( $3 \times 1460 \mathrm{ml}$ to triple rinse container)

TECHNEAT APPLICATOR (20 litre concentrate tank) Mls water required for correct dilution when using a Dosatron unit at the relevant concentration (\%).

|  |  | Water volume (l/ha) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 50 |  | 60 |  | 70 |  | 75 |  | 80 |  | 90 |  | 100 |  | 110 |  |
