

Seeds with full Vigour! Performer

Enhanced Performance in SOSR

- ✿ Highest oil content – Descriptive List 2020-2025
- ✿ Consistently excellent gross output
- ✿ Medium maturity

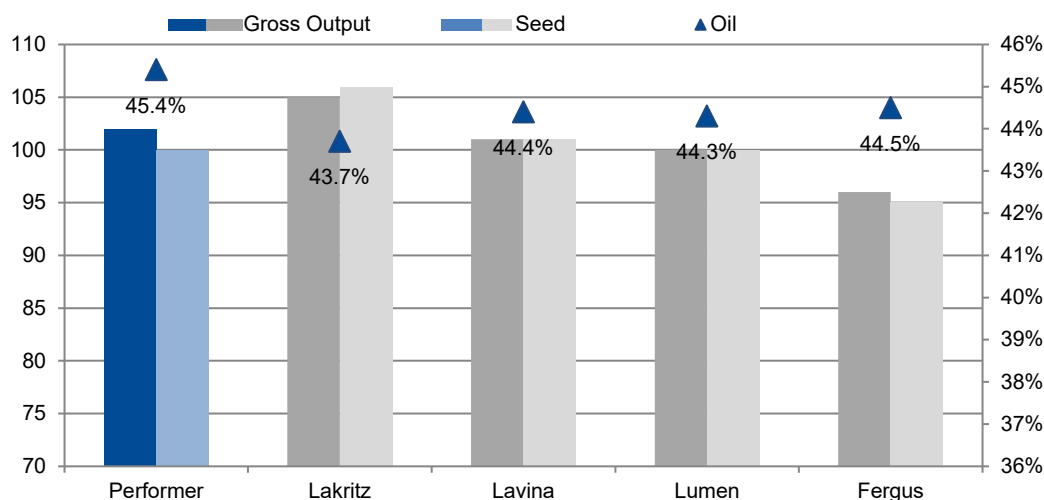

Variety description

Characteristic			1	2	3	4	5	6	7	8	9	
Gross output	102%	Low										High
Seed yield	100%	Low										High
Oil content	45.4	Low										High
Early vigour		Low										High
Shortness of stem		Tall										Short
Earliness of flowering		Late										Early
Earliness of maturity		Late										Early

Top tips for making a success of SOSR

Drill at the right time: Sow in Late March/Early April once soil temperatures are warm, to ensure a rapid germination. Resist the temptation to drill too early.

Weeds: Use a residual herbicide to remove early weed competition.

Pests: Monitor and treat for cabbage flea beetle and pollen beetle. Treat pollen beetle at green bud stage if necessary, not once flowering.

Fertiliser: Most soils types and indices will require:

N – 50 to 150kg/ha. Where more than 80kg N/ha is required apply 50kg N/ha in the seed bed and the remainder by early May.

S – 50 to 80kg/ha. Applied in March or into the seedbed

P – 30 to 90kg/ha. } At indices of 1 or below for P & K apply to the seedbed.

K – 20 to 80kg/ha. } At 2 or higher apply at your convenience.

Consult RB209 or use a FACTS qualified advisor for detailed crop nutritional requirements including trace elements.

Seed Rate: Target population is 70 plants/m². Adjust rates accordingly for drilling for germination (80 to 90 seeds/m²)

InVigor® is a registered Trade Mark of BASF. Always use plant protection products safely. Always read the label and product information before use. If you have any queries or require further information, please contact your local BASF Agronomy Manager. Contact details can be found at agricentre.basf.co.uk. Or the BASF Technical Services Hotline: 0845 602 2553.
