Three ways a dimethenamid-p containing herbicide helps get your OSR off to the best start...

1. It helps you establish a good, even crop before winter

To establish a good, even crop, our advice is to:

- **5mm**
  - **ACHIEVE GOOD SEEDBEDS**
  - (Ideal soil crumb size <5mm)

- **DRILL INTO MOIST SOIL**
- **RETAIN MOISTURE THROUGH ROLLING**
- **REMOVE WEEDS EARLY**

2. It provides long-lasting and reliable control of key weeds

- **RELIABLE IN DRY CONDITIONS DUE TO MULTIPLE POINTS OF UPTAKE BY THE WEED**
- **RESIDUAL ACTIVITY ON A WIDE SPECTRUM OF WEEDS, INCLUDING:**
  - Red dead nettle
  - Chickweed
  - Common field speedwell
  - Shepherd’s purse
  - Field maple
  - Fumitory
  - Red dead dock
- **AVOID HAVING TO RELY ON LATE AUTUMN SPRAYS...**
- **CONTACT HERBICIDES CAN BE AFFECTED BY LEAF WETNESS**
- **FEWER SPRAY DAYS**

3. It plays a key role in sustainable black-grass management

- **OSR OFFERS A GOOD OPPORTUNITY TO CONTROL BLACK-GRASS AND USE DIFFERENT MODES OF ACTION COMPARED TO CEREALS**
- **A LOW RESISTANCE RISK HERBICIDE AND PROVIDES A KEY START TO THE BLACK-GRASS PROGRAMME**
- **REMOVES SOME OF THE BLACK-GRASS POPULATION**
- **FOR BEST CONTROL, USE A 3 PRONGED ATTACK – A PROGRAMME OF AN EARLY RESIDUAL, LIKE A DIMETHENAMID-P CONTAINING HERBICIDE, FOLLOWED BY CLETHODIM, THEN PROPYZAMIDE**

*Dimethenamid-P herbicides include: Springbok (dimethenamid-P + metazachlor), Shadow, Elk, Katamaran Turbo, Banastar (dimethenamid-P + metazachlor + quinmerac), Tanaris and Topkat (dimethenamid-P + quinmerac). All products are registered Trade Marks of BASF. Always use plant protection products safely. Always read the label and product information before use.
